By Reports of Deaths After COVID Vaccines Near 16,000, CDC Urges Pregnant Women to Get the Vaccine

VAERS data released Friday by the CDC included a total of 752,803 reports of adverse events from all age groups following COVID vaccines, including 15,937 deaths and 105,758 serious injuries between Dec. 14, 2020 and Sept. 24, 2021.

Data released Friday by the Centers for Disease Control and Prevention (CDC) showed that between Dec. 14, 2020 and Sept. 24, 2021, a total of 752,803 adverse events following COVID vaccines were reported to the **Vaccine Adverse Event Reporting System (VAERS)**. The data included a total of 15,937 reports of deaths — an increase of 551 over the previous week.

There were 105,758 reports of serious injuries, including deaths, during the same time period — up 5,348 compared to the previous week.

Excluding "foreign reports" filed in VAERS, 581,831 adverse events, including 7,233 deaths and 43,862 serious injuries, were reported in the U.S. between Dec. 14, 2020 and Sept. 24, 2021.

Of the 7,215 U.S. deaths reported as of Sept. 24, 11% occurred within 24 hours of vaccination, 19% occurred within 48 hours of vaccination and 29% occurred in people who experienced an onset of symptoms within 48 hours of being vaccinated.

In the U.S., 386.2 million COVID vaccine doses had been administered as of Sept. 24. This includes: 223 million doses of Pfizer, 115 million doses of Moderna and 15 million doses of Johnson & Johnson (J&J).

From the 9/24/2021 release of VAERS data:

Found 752,803 cases where Vaccine is COVID19

Totals

Event Outcome	Count	Percent
Death	15,937	2.12%
Permanent Disability	22,242	2.97%
Office Visit	117,877	15.66%
Emergency Room	5,171	0.69%
Emergency Doctor/Room	85,951	11.37%
Hospitalized	44,587	5.92%
Hospitalized, Prolonged	2,441	0.32%
Recovered	236,429	31.40%
Birth Defect	504	0.07%
Life Threatening	16,874	2.24%
Not Serious	204,389	16.90%
TOTAL	752,803	100.00%

1 Serious some cases have multiple vaccinations and symptoms, a single case can account for multiple entries in this table. This is the reason why the Total Count is greater than 752,803 (the number of cases found), and the Total Percentage is greater than 100.

The data come directly from reports submitted to VAERS, the primary government-funded system for reporting adverse vaccine reactions in the U.S.

Every Friday, VAERS makes public all vaccine injury reports received as of a specified date, usually about a week prior to the release date. Reports submitted to VAERS require further investigation before a causal relationship can be confirmed.

Historically, VAERS has been shown to report only 1% of actual vaccine adverse events.

This week's U.S. data for 12- to 17-year-olds show:

- 20,907 total adverse events, including 1,258 rated as serious and 21 reported deaths. Two of the 21 deaths were suicides.The most recent deaths involve a 17-year-old male (VAERS ID. 1695213) with cancer who was vaccinated April 17, tested positive for COVID on July 20, was hospitalized and passed away Aug. 29; and a 16-year-old female (VAERS ID. 1694160) who died from a pulmonary embolism nine days after receiving her Pfizer dose.

Other recent reported deaths include two patients (VAERS I.D. 1655104) who died after their second dose of Pfizer, including a 13-year-old female, a 15-year-old boy (VAERS I.D. 1690004) who previously had COVID, was diagnosed with cardiomyopathy in May 2021 and died four days after receiving his second dose of Pfizer's vaccine when he collapsed on the soccer field and went into ventricular tachycardia, and a 13-year-old girl (VAERS I.D. 1682549) who died after suffering a heart condition after receiving her first dose of Pfizer.

- 1,111 reports of anaphylaxis among 12- to 17-year-olds with 99% of cases attributed to Pfizer's vaccine.
- 314 reports of myocarditis and pericarditis (heart inflammation) with 508 cases attributed to Pfizer's vaccine.
- 112 reports of blood clotting disorders, with all cases attributed to Pfizer.

This week's U.S. VAERS data, from Dec. 14, 2020 to Sept. 24, 2021, for all age groups combined, show:

- 19% of deaths were related to cardiac disorders.
- 54% of those who died were male, 41% were female and the remaining death reports did not include gender of the deceased.
- The average age of death was 72.8.
- Of the 2,882 cases of Bell's Palsy reported, 59% were attributed to Pfizer vaccinations, 42% to Moderna and 0% to J&J.
- 424 reports of Guillan-Barré syndrome, with 49% of cases attributed to Pfizer, 32% to Moderna and 27% to J&J.
- 155,585 reports of anaphylaxis with 43% of cases attributed to Pfizer's vaccine, 50% to Moderna and 7% to J&J.
- 8,699 reports of blood clotting disorders. Of those, 4,191 reports were attributed to Pfizer, 3,524 reports to Moderna and 1,930 reports to J&J.
- 2,628 cases of myocarditis and pericarditis with 1,662 cases attributed to Pfizer, 858 cases to Moderna and 10 cases to J&J's COVID vaccine.

CDC issues 'urgent' alert for pregnant women to get COVID vaccine, despite thousands of reported adverse events

The CDC on Wednesday issued its stringent guidance to date urging pregnant women and those who recently gave birth to be vaccinated against COVID. A total of 161 pregnant women have died of COVID, the CDC said, including 12 deaths in August.

"CDC strongly recommends COVID-19 vaccination either before or during pregnancy because the benefits of vaccination outweigh known or potential risks," the agency said in a health alert. To date, only 31% of pregnant people have been vaccinated, the CDC said.

The CDC said COVID during pregnancy can cause preterm birth or sick babies that require intensive care. "Other adverse pregnancy outcomes, such as stillbirth, have been reported," the CDC said.

However, as of Sept. 24, CDC VAERS data show 3,821 pregnant women have reported adverse events related to COVID vaccines, including 1,144 reports of miscarriage or premature birth — a far greater number than the statistics the CDC used to justify its "urgent" recommendation that pregnant woman get vaccinated.

Woman injured by COVID vaccine pleads with health agencies for help, as Pfizer pressures local news agency to kill story

In an exclusive interview with The Defender, 40-year-old Kristi Dobbs said she's spent nine months pleading with U.S. health agencies to research the neurological injuries she developed after receiving Pfizer's COVID vaccine, only to be ignored after she provided the National Institutes of Health (NIH) blood sample for research.
